

Diabetes Program

Better Outcomes, Lower Costs

Nationally, diabetes is consistently a top trend driver. Our WellManaged Diabetes Program takes a multi-faceted approach to reduce pharmacy trend and improve patient outcomes. Our program emphasizes prevention, early diagnosis and appropriate treatment.

The WellManaged Diabetes Program includes:

Prevention and Education

Personalized support helps patients reach their individual goals. For members with pre-diabetes, we focus on improving lifestyle choices to delay or prevent disease.

Care Coordination

For patients diagnosed with diabetes, we increase medication adherence, close gaps in care and avoid complications that decrease quality of life and drive up the cost of care.

Patient Engagement

Patient data from connected devices, patient-reported outcomes and pharmacy claims is used to support patients and optimize treatment. With our WellConnect texting platform, we send actionable messages based on member personality to engage patients in their care.

Copay Assistance

Manufacturer copay assistance on eligible diabetes medications maximizes savings. We help patients enroll in copay cards to keep out-of-pocket costs low.

Prescriber Engagement

Our clinicians work with prescribers to ensure low-cost treatment options are tried first, support medication adherence, increase formulary compliance and ensure cost-effective treatment.
